The cascadic algorithm for the Dirichlet problem

Gilyova L.V., Shaidurov V.V.

Introduction	7
1 The cascadic algorithm for 2D problems	10
1.1 The weakly nonlinear elliptic equation	10
1.1.1 Formulation of the differential problem.....	10
1.1.2 Formulation of the discrete problem.	11
1.1.3 Formulation of the cascadic algorithm.....	13
1.1.4 Auxiliary estimates.	15
1.1.5 Convergence of the cascadic algorithm.	16
1.2 The indefinite-sign elliptic problem	17
1.2.1 Formulation of the differential problem.....	17
1.2.2 Formulation of the discrete problem.	19
1.2.3 Formulation of the cascadic algorithm.....	24
1.2.4 An auxiliary operator.	26
1.2.5 Convergence of the cascadic algorithm.	28
1.2.6 Optimization of the number of iterations.	30
1.3 The plane elasticity problem	34
1.3.1 Formulation of the differential problem.....	34
1.3.2 Formulation of the discrete problem.	36
1.3.3 Formulation of the cascadic algorithm.....	38
1.3.4 Convergence of the cascadic algorithm and optimiza- tion of the number of iterations.	40
2 The cascadic algorithm for the 3D Dirichlet problem	41
2.1 The 3D Dirichlet problem on a polyhedron	41
2.1.1 Formulation of the differential problem.....	41
2.1.2 Formulation of the discrete problem.	42
2.1.3 Formulation of the cascadic algorithm.....	45
2.1.4 Convergence of the cascadic algorithm.	46
2.1.5 Optimization of the number of iterations.	49
2.2 Asymptotic stability of the algorithm of triangulation refine- ment for a 3D domain	51
2.2.1 The algorithm of dividing.	51
2.2.2 Criteria of quality of a triangulation.	60
2.2.3 Estimation of quality of the triangulation.....	62
2.3 The cascadic algorithm for a domain with a smooth curvilinear boundary	68
2.3.1 Formulation of the differential problem.....	68
2.3.2 Formulation of the discrete problem.	69

2.3.3	An auxiliary result.	72
2.3.4	Convergence of the Galerkin solution.....	76
2.3.5	The estimate of the eigenvalues of the matrix of the discrete problem.	82
2.3.6	Convergence of the cascadic algorithm.	84
3	Numerical results	88
3.1	Dependence of the convergence rate of the V -cycle upon smooth- ing	88
3.1.1	Preliminary remarks.	88
3.1.2	Formulation of the multigrid algorithm.	89
3.1.3	Numerical tests.	90
3.2	Cascadic algorithm for the Poisson equation	93
3.2.1	Two-step semi-iterative process.	93
3.2.2	Dependence of the convergence on the number of iter- ation steps.	94

Completely splitting method for the Navier-Stokes problem

Bykova E.G., Kireev I.V., Rde U., Shaidurov V.V.

Introduction	102
1 The formulation of the problem and the splitting into physical processes.....	102
2 Discretization of the fractional step of pressure work.....	105
2.1 Integration over Ω	111
2.2 Integration with the help of small fictitious domains for uni- formity of equations	125
3 Discretization of the fractional step of convection-diffusion	128
3.1 Further splitting and discretization of the equation for the first component of velocity.....	128
3.2 Splitting and discretization of the equation for the second component of velocity	144
3.3 Integration with the help of small fictitious domains for uni- formity of equations	149
4 Numerical experiment	154
5 Conclusions	156
5.1 Splitting method vs. solution with complete operator	156
5.2 Staggerred meshes vs. united mesh	156
5.3 Square vs. triangle mesh	157
